Annex 5: Roles in a team

Each team splits into three roles: **Coder, Researcher** and **Communicator**, with two people per role by default. Choose based on your profiles and interests. If your team has no data scientist, the person most curious about coding becomes a Coder, with help from the AI and the mentors.

Each role leads part of the task and supports the rest. Coders carry most of the load at the start, producing the data findings the others build on. Researchers work throughout, adding context and evidence. Communicators carry most of the load at the end, shaping how the results are presented. **The policy brief, the "policy tool" and the AI sheet are owned by the whole team**, and every role contributes to the final products. By the end of Day 1, the whole team agrees on a draft concept of the "policy tool" and presents the idea to everyone.

• Coder

Suits you if you have a data science, GIS, computer science backgrounds, or you are curious to try coding with AI. Coding experience helps, but its absence is not a big obstacle: the Setup Guide in the annex helps to start from scratch, and there is AI and coaches to help.

Tasks

- Lead the data analysis for Q1 and Q3.
- Check that every result is backed by the challenge data and verified.
- Create the figures, maps and charts for the brief and the policy tool.

Outcomes

- Q1 and Q3 results with final figures, maps and charts handed to the team by the end of Day 1.
- Notes for the AI sheet: key prompts, AI errors caught and checks run.

• Researcher

Suits you if you have a political science, policy, or environmental background, or you like reading reports and checking sources.

Tasks:

- Lead the desk research for Q2.
- Put the Coders' results in context and compare them with public sources.
- Supply the evidence for Q4.
- Q2 findings with a source list, and a note of what could not be verified.

Outcomes

- Q2 findings with a source list
- Evidence and arguments for the Q4 recommendation.
- Notes for the AI sheet.

• Communicator

Suits you if you have a communication, media, design or journalism background, or you like writing and explaining.

Tasks:

- Lead Q4, turning the team's evidence into a recommendation.
- Lead the writing of the policy brief
- Shape the "policy tool": decide its format, look and key messages, with input from the Coders and Researchers.
- Collect the team's AI notes throughout and compile the AI sheet.

Outcomes

- Ideas on the format and design of the "policy tool"
- The written text of the policy brief in the given template
- The compiled AI sheet
